## $\mathsf{Dispensette}^{^{\mathrm{B}}}\mathcal{S}$ Bottletop $\mathsf{Dispenser}$

1-10 ml

6 D

40

凶

Dispensette<sup>®</sup> *S* bottletop dispensers build on the fifty year history of BRAND dispensing expertise. Continual upgrades makes this the safest and most convenient bottletop dispenser ever, all while retaining the features that make the Dispensette<sup>®</sup> the world's favorite bottletop dispenser. They mount directly on most solvent and reagent bottles for faster, more convenient dispensing. Instruments are autoclavable at 121°C (250°F) for use with sterile reagents.

- **Dispense most lab reagents:** Choose the Dispensette® *S* for acids, bases, saline solutions, as well as many organic solvents; the Dispensette® *S* Organic for organic solvents, including combinatorial chemistry solvents, concentrated acids such as HCl and HNO<sub>3</sub>, trifluoroacetic acid (TFA), tetrahydrofuran (THF), and peroxides. See Selection Chart on page 36 for help choosing the best dispenser.
- Deliver accurate, precise volumes: Dispensers are accurate to 0.5% (0.6% for 1mL models), with coefficients of variation of 0.1% (0.2% for 1mL). Digital models feature accurate and reproducible volume settings via a mechanical digital display.
- Increase laboratory safety: Dispensers mount on reagent bottles to reduce poured reagent transfers. They include a number of safety features to reduce the risk of injury from inadvertent dispensing and splashes. Recirculation valve system enhances reagent conservation and safety. Many accessories are available for remote, serial and drum dispensing.
- **Resist wear and damage:** Unique design ensures smooth operation and eliminates wearing parts. Dispensers disassemble easily to simplify cleaning and maintenance. The new system eliminates seals for a lifetime of reliable dispensing.
- **HF and trace analysis dispensing:** For dispensing of high purity acids and solvents, or hydrofluoric acid, choose the Dispensette<sup>®</sup> *S* Trace Analysis. For details, see page 35.

# The standard in bottletop dispensing for a half century

### Dispensette® ${\boldsymbol{\mathcal{S}}}$ Bottletop Dispensers

Dispensette<sup>®</sup> S Organic Digital

Dispensette® *S* Analog-adjustable

### Dispensette<sup>®</sup> *S* Bottletop Dispensers

### Dispensette<sup>®</sup> *S* Volume Adjustment

### **Product Features:**

Both the Dispensette<sup>®</sup> *S* and Dispensette<sup>®</sup> *S* Organic are constructed using the "floating piston" principle.

Each piston is matched with precise tolerances to the cylinder of the instrument. A thin film of the dispensed liquid of just a few µm thick acts as a non-wearing seal that reduces friction, so dispensing is easy and convenient.

- The GL45mm standard thread, plus included adapters, fit most common lab bottles.
- The valve block can be rotated 360° so that the bottle label always faces the user for safety.
- A telescoping filling tube adjusts to different bottle sizes.
- The instrument is easy to disassemble for cleaning.
- Valves are replaceable for simple, economical service.
- New valve design eliminates seals for trouble-free operation.

- Dispensette<sup>®</sup> *S* and Dispensette<sup>®</sup> *S* Organic are autoclavable at 121°C.
- Easy to calibrate and adjust in order to comply with ISO 9001 and GLP guidelines. A positive indicator automatically indicates adjustment from factory settings.
- An extensive line of accessories facilitates specialized dispensing tasks like sterile applications or dispensing from large containers.

### Dispensette<sup>®</sup> *S* Bottletop Dispensers

### Applications

#### **One-handed operation**

"Floating piston" design eliminates the seals that often wear and fail on other dispensers. This allows the Dispensette<sup>®</sup> *S* piston to move very smoothly, permitting safe, simple, onehanded dispensing, even with a nearly-empty reagent bottle.

### **Dispensing sterile fluids**

Dispensette<sup>®</sup> *S* and Dispensette<sup>®</sup> *S* Organic bottletop dispensers are autoclavable at 121°C (250°F) and can be fitted with an optional microfilter to prevent contamination of bottle contents. Sterile technique must be followed.

#### Serial dispensing

The optional flexible discharge tube with safety handle speeds serial dispensing tasks, and permits fast and precise dispensing even into narrow test tubes. Integrated recirculation valve helps purge bubbles before use.

### Dispensing sensitive reagents

Optional drying tube screws into the accessory port of the Dispensette<sup>®</sup> S to protect sensitive reagents from humidity or CO<sub>2</sub> (Absorbing agent not included).

### Dispensing from bulk containers minimizes risk of contaminating high-purity reagents

Simply connect the Dispensette<sup>®</sup> S or Dispensette<sup>®</sup> S Organic to the optional Remote Dispensing System for accurate dispensing from drums and other bulk containers up to 10 meters away. Maximum delivery height is 1.2 meters. A quick-release connector with integrated valves simplifies changing the bulk container. The drum adapter air inlet filter minimizes risk of contaminating high-purity reagents. **NOTE**: Not for use with recirculation valve, pressurized vessels, peroxides (which will react with the platinumiridium spring), HF or other liquids which attack borosilicate glass, alumina ceramic, PFA, ETFE, FEP or PTFE. Observe all safety instructions, operating exclusions, and limitations of your specific operating manual of the Dispensette<sup>®</sup> S bottletop dispenser model.

Remote Dispensing System

# Dispensette<sup>®</sup> $\boldsymbol{S}$ Trace Analysis

### Bottletop Dispensers

### For dispensing high-purity chemicals

The Dispensette<sup>®</sup> *S* Trace Analysis provides outstanding performance for precise-volume dispensing of high-purity media for trace analysis. The Dispensette<sup>®</sup> *S* Trace Analysis is also suitable for dispensing HF (Pt-Ir model).

The components of the fluid path have been selected to only contain the highest purity materials, such as fluoroplastics and sapphire. Depending on application, either platinumiridium (Pt-Ir) or tantalum (Ta) valve springs can be chosen. The volume range is from 1 to 10mL.

- Especially well-suited for dispensing acids, bases and hydrogen peroxide (Tantalum (Ta) models only).
- Trace metal content of dispensed liquid is generally in the low ppb range or, depending on application, even in the low ppt range.

#### Dispensing of high-purity chemicals in trace analysis

- Plastics in contact with media consist of high-purity materials such as PTFE, ETFE, PCTFE, FEP and PFA. The purest sapphire is used for replaceable valves. Depending on the application, platinum-iridium or tantalum are available as spring materials.
- A field-tested cleaning process before use in trace analysis is described in the operating manual.
- Easy to disassemble for replacement of the dispensing cartridge.

#### **Recommended application range**

Dispensing medium	Valve spring: Pt-Ir	Valve spring: Ta
Acetic acid	+	+
Ammonia solution	+	+
Bromine	+	+
Hydrochloric acid	+	+
Hydrofluoric acid*	+	-
Hydrogen peroxide	-	+
Nitric acid	+	+
Perchloric acid	+	+
Phosphoric acid	+	+
Sodium hydroxide, 30%	+	-
Sulfuric acid	+	+
Water	+	+

+ suitable - not suitable

\* Hydrofluoric acid reacts slightly with sapphire resulting in mildly elevated aluminum values. To reduce these values we recommend discarding 3-5 dispensings of 2 ml each before performing the analysis.

The above recommendations reflect testing completed prior to publication. Always follow instructions in the operating manual of the instrument as well as the reagent manufacturer's specifications. Should you require information on chemicals not listed, please feel free to contact BrandTech®. Status as of 08152

The high-purity materials release virtually no metal ions after appropriate cleaning. This makes the Dispensette<sup>®</sup>  $\mathcal{S}$  Trace Analysis bottletop dispenser a superior choice for trace analysis.

### Replaceable dispensing cartridge

If the piston seal is worn after	The cartridge is fully

\* Choose ETFE/PTFE adapters, if required, \*\* use PTFE seal for valve block

The above recommendations reflect testing completed prior to publication. Always follow instructions in the operating manual of the instrument as well as the reagent manufacturer's specifications. In addition to these chemicals, a variety of organic and inorganic saline solutions (e.g., biological buffers), biological detergents and media for cell culture can be dispensed. Should you require information on chemicals not listed, please feel free to contact BrandTech Scientific. Status as of: 0605/13

#### Note:

For dispensing HF, we recommend the use of the Dispensette<sup>®</sup> S Trace Analysis bottletop dispenser with platinum-iridium valve spring (See page 35).

### Dispensette<sup>®</sup> $\boldsymbol{\mathcal{S}}$ Bottletop Dispenser Technical Data

### **Operating limitations** (all instruments)

Liquids which form deposits may make the piston difficult to move or may cause jamming (e.g., crystallizing solutions or concentrated alkaline solutions).

When dispensing inflammable media, make sure to avoid the buildup of static charge, (e.g., do not dispense into plastic vessels; do not wipe instruments with a dry cloth).

The Dispensette® is designed for general laboratory applications and complies with the relevant standards, e.g., DIN EN ISO 8655. Compatibility of the instrument for a specific application (e.g., trace material analysis, food sector, etc.) must be checked by the user. Approvals for specific applications, (e.g., for production and administration of food, pharmaceuticals and cosmetics) are not available.

#### **Items supplied**

Each Dispensette<sup>®</sup> *S*, Dispensette<sup>®</sup> *S* Organic, Dispensette<sup>®</sup> *S* Trace Analysis includes:

- Certificate of performance
- Discharge tube
- Valve mounting/calibration tool
- Adapters and filling tube
- Operating manual
- One-year warranty

#### Supplied adapters & filling tubes

Nominal Volume, mL	Adapter for bottle thread, mm	Filling tube length, mm
For Dispensette®	S & Dispensette® S	6 Organic (PP)
1, 2, 5, 10	24, 28, 33, 38, S40	125-240
25, 50, 100	33, 38, S40	170-330
For Dispensette®	S Trace Analysis (E	TFE, PTFE*)
10	28, 33, S40*	125-240

#### Limitations of use (all instruments)

### This instrument is designed for dispensing liquids, observing the following physical limits:

- Use between +15°C and +40°C (59°F and 104°F) of instrument and reagent.
- Vapor pressure up to max. 600mbar. Aspirate slowly above 300mbar, in order to prevent the liquid from boiling.
- Kinematic viscosity up to 500mm<sup>2</sup>/s (dynamic viscosity [mPas] = kinematic viscosity [mm<sup>2</sup>/s] x density [g/cm<sup>3</sup>]).
- Density: Dispensette<sup>®</sup> S/Dispensette<sup>®</sup> S Organic: up to 2.2g/cm<sup>3</sup> and Dispensette<sup>®</sup> S Trace Analysis up to 3.8g/cm<sup>3</sup>.

#### **Operating exclusions – Dispensette<sup>®</sup> S**

#### Never use the Dispensette<sup>®</sup> $\mathcal{S}$ with:

- Liquids attacking  $\rm Al_2O_3$  -ceramic, ETFE, FEP, PFA and PTFE (e.g., dissolved sodium azide\*).
- Liquids attacking borosilicate glass (e.g., hydrofluoric acid).
- Liquids which are decomposed catalytically by platinum-iridium (e.g., H<sub>2</sub>O<sub>2</sub>).
- Hydrochloric acid > 20% and nitric acid > 30%.
- Tetrahydrofuran.
- Trifluoroacetic acid.
- Explosive liquids (e.g., carbon disulfide).
- Suspensions (e.g., of charcoal) as solid particles may clog or damage the instrument.
- Liquids attacking PP (screw cap).

### **Operating exclusions – Dispensette<sup>®</sup> S Organic**

#### Never use the Dispensette<sup>®</sup> $\mathcal{S}$ Organic with:

- Liquids attacking Al<sub>2</sub>O<sub>3</sub>-ceramic, tantalum, ETFE, FEP, PFA and PTFE (e.g., dissolved sodium azide\*).
- Liquids attacking borosilicate glass (e.g., hydrofluoric acid).
- Bases and saline solutions.
- Explosive liquids (e.g., carbon disulfide).
- Suspensions (e.g., of charcoal) as solid particles may clog or damage the instrument.
- Liquids attacking PP (screw cap).

#### **Operating exclusions – Dispensette®** *S* **Trace Analysis**

#### Never use the Dispensette® S Trace Analysis with:

- Liquids attacking Al<sub>2</sub>O<sub>3</sub> sapphire or fluoroplastics like ETFE, FEP, PFA, PCTFE, PTFA and PTFE (e.g., dissolved sodium azide\*).
- Liquids which are decomposed catalytically by platinum-iridium (e.g., H<sub>2</sub>O<sub>2</sub>) or tantalum, depending on the construction of the instrument.
- Organic solvents.
- Trifluoroacetic acid.
- Explosive liquids (e.g., carbon disulfide).
- Suspensions (e.g., of charcoal) as solid particles may clog or damage the instrument.
- The Dispensette<sup>®</sup> S Trace Analysis must not be autoclaved.

\*Dissolved sodium azide permitted up to a concentration of max 0.1%
