

RESPONSIBLE | Environmental Sustainability

Protecting the environment is a fundamental principle of our Trade Up program

Through a strategic partnership, we take in your old centrifuge and recycle it, part by part. Not only are instruments recycled, but other hardware like rotors and PCs are reclaimed. Best of all, this sustainable practice can allow our customers to realize meaningful discounts on their new equipment while contributing to a more sustainable future.

When we take in an old instrument, we follow a rigorous process to carefully repurpose each component.

- All steel and plastic components are separated and funneled through appropriate chains for recycling
- Refrigerants are disposed of in accordance with EPA guidelines
- Precious metals from computer components are repurposed
- Wood pallets are reused

When it comes to purchasing a new instrument, our experienced sales representatives will help you select the optimal instrument configuration to replace your old unit.

Our Trade Up and Recycling Programs save 614 TONS of waste from entering landfills annually.* That's the equivalent of nearly FIVE Statues of Liberty!†

*2023 Forecast as of June 30th, 2023. †Based on weight without base of 125 tons.

Please contact your local sales rep or visit beckman.com/request-quote for additional information or a customized quote. Thank you for partnering with us to build a more sustainable future.
